ABDULLAH HASHMI

+91-9835445727 abdullahhashmi24012006@gmail.com LinkedIn GitHub

Education

University School of Automation & Robotics, GGSIPU **Aug. 2024 – July 2027**
B.Tech in Artificial Intelligence & Data Science *9.02/10.0 – New Delhi*

Aligarh Muslim University (AMU) **Aug. 2021 – July 2024**
Diploma in Computer Engineering *9.91/10.0 – Aligarh, UP*

Technical Skills

Programming	Python, Java, C, Dart, SQL
AI/ML	Deep Learning, CNNs, NLP, Computer Vision, RAG, Hyperspectral Imaging
Agentic AI	LangChain, LangGraph, Multi-Agent Systems, ReAct, MCP, Human-in-the-Loop, Guardrails, Tavily
Libraries	TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib
Backend & APIs	FastAPI, REST APIs, Docker
Mobile	Flutter, Firebase, Provider
Databases	SQLite, Firestore, Supabase (PostGIS), Pinecone, MySQL
Cloud & Tools	Git, GitHub, Vercel, Render, Antigravity

Experience

PictureTime Digiplex Private Limited **Mar 2026 – Jun 2026**
Software Engineer Intern *On-site / Hybrid*

– Maintained web app, admin dashboard, and mobile application; automated operational workflows, cutting manual effort and improving system reliability.

Prodigal AI Technologies Pvt. Ltd. **Jul 2025 – Aug 2025**
Automation & Python Intern *Remote*

– Developed a Python Telegram bot using the Telegram Bot API to automate reporting workflows including command handling, parsing, and validation, reducing manual effort by **90%**.

Projects

EchoPath | *Flutter, TensorFlow Lite, On-Device Computer Vision, TTS* GitHub

– Built a real-time, fully on-device mobile AI system enabling blind and visually impaired users to navigate safely using only a smartphone camera, with no specialized hardware required.
– Implemented continuous object detection with distance/direction estimation and priority-based hazard scoring to reduce alert fatigue, delivering spoken guidance via TTS.
– Designed for fully offline operation, ensuring low-latency inference and on-device privacy with no camera data leaving the device.

GovLens AI | *Python, LangGraph, Multi-Agent Systems, FastAPI, Next.js* GitHub | Live Demo

– Built an agentic AI platform that researches and verifies government recruitment exam details through a multi-agent LangGraph workflow across official and secondary sources.
– Built source-authority classification and conflict-resolution pipelines that compare government and secondary sources before presenting evidence-backed results.
– Deployed Next.js frontend on Vercel and FastAPI backend on Render using Groq-powered LLMs, web search, SQLite persistence, and Docker; generates structured PDF reports.

AWS-USAR RAG Chatbot | *Python, FastAPI, LangChain, Pinecone, Gemini* GitHub

– Built a Retrieval-Augmented Generation (RAG) chatbot using **LangChain, Pinecone, and Gemini** to answer queries from custom PDF and DOCX knowledge bases.
– Implemented document ingestion and semantic search using **Sentence-Transformers** embeddings and Pinecone vector indexing for relevant context retrieval.
– Developed a **FastAPI REST API** that returns LLM-generated answers along with retrieved source chunks for transparent, evidence-grounded responses.

Achievements & Leadership

– Secured **2nd Runner-up** at Hackers' Playground among **1000+ teams** for a real-time whiteboard and voice collaboration tool.
– Solved **250+ LeetCode problems**, demonstrating proficiency in data structures and algorithms.
– Conducted Python, Java, and C programming workshops for **150+ students** at AMU.
